

1. Ideation Phase

Project Title: Import Data using Transform Maps (Spreadsheet)

1. Project Description & Business Scenario

This micro project focuses on importing structured data from an external spreadsheet into the ServiceNow platform using Import Sets and Transform Maps. The project simulates a real-world scenario where bulk employee data is received in Excel format and must be migrated into ServiceNow efficiently and accurately. The spreadsheet data is loaded into an Import Set table (staging area) and mapped to the target Employee Test table.

2. Key Objectives & Business Requirements

- **Bulk Data Migration:** Load external Excel spreadsheet data into ServiceNow Import Sets.
- **Automated Field Mapping:** Configure Transform Maps mapping source columns to target fields.
- **Data Deduplication (Coalesce):** Prevent duplicate record creation by setting Coalesce = true on Employee ID.
- **Reporting & Analytics:** Create Pie Charts, Bar Charts, and List Reports to visualize employee distribution.
- **Centralized Dashboard:** Consolidate reports onto an Employee Analytics Dashboard.
