

4. Project Planning Phase

Transform Execution & Coalesce Optimization Strategy

1. Coalesce Implementation Strategy (Phase 6)

In enterprise projects, spreadsheets may be imported repeatedly. Without Coalesce, duplicate records are created. Setting Coalesce = true on `Employee ID` ensures existing records are updated while new records are inserted.

2. Data Update Verification Rules (Phase 7)

Import Action	Condition	Expected Transform Result
New Employee ID	Employee ID does not exist in target table	Record Inserted
Existing Employee ID (New Data)	Employee ID exists, but Email/Name updated	Record Updated
Existing Employee ID (Same Data)	Employee ID and all values identical	Record Ignored / Skipped
